

PIGEON

Installation Guide

Plugging your Pigeon device into your skip timer network is incredibly easy.

Step 1 - Locate a hub with a free port

Just locate a hub with a free port. It doesn't matter which port you use, as long as you use one of the 1-8 ports. The uplink port is reserved for communication between hubs.

Step 2 - Mounting

The Pigeon device comes with very strong internal magnets and anti-slip tape. The Pigeon can be placed anywhere you have a metal surface. For optimal performance, mount Pigeon with a clear view of the sky.

Step 3 - Plug to port

Plug into the hub.
Installation is complete.

If you have an MST-14, you will plug directly into the MST-14 controller via the CAN expansion port. The Pigeon device is compatible with SC-12, MST-14, MGT-14, and NGT-14.

Step 4 - Contact Customer Success

Contact our Customer Success Rep to activate your Spec-Rite Online subscription and start maximizing your Pigeon functionality.
